

Lithium Polymer

Sanyo Lithium Polymer
Rechargeable Batteries

New generation rechargeable battery that technology of completely gel-type electrolyte with high ion conductivity brings Lithium Polymer Battery

Presently, demand is rising rapidly for lightweight and thin portable information & communication devices such as portable phones, portable audio systems and PDA (personal digital assistants). Similarly, there is demand for thin and lightweight batteries for use in these devices. SANYO's lithium polymer battery can be utilized in a wide variety of market products.

SANYO has developed, and introduces a lithium polymer battery that achieves an ultra-thin under 4mm with high performance through its own original technology and high reliability employing a complete gel-type electrolyte. Lithium polymer battery is new generation rechargeable battery to meet the demands of evolution to various, thinner and lighter battery.

● Model of Gel-type Electrolyte

Structure model of electrolyte gelled by cross-linked polymer

Electrolyte

Cross-linked Polymer

● Structure of Lithium Polymer Battery

● Cross section

- Casing / Aluminum laminate film
- Positive electrode collector
- Positive electrode
- Gel type electrolyte
- Separator
- Negative electrode
- Negative electrode collector

● Main Features

● High Performance and High Reliability with Newly Developed Complete Gel Type Electrolyte

The newly developed polymer electrolyte obtains superb long life reliability, featuring more than 500 recharging cycles while also achieving high performance (gravimetric energy density of 166Wh/kg & volumetric energy density of 348Wh/l).

● Excellent Discharge Characteristics that Allow for Discharge at -20°C

Typical points of weakness for lithium polymer batteries were its load and temperature characteristics. This newly developed polymer electrolyte possesses high ion conductivity even at low temperatures, thus making possible discharges at -20°C .

● Achieves an Ultra-Thin Type Thickness of Under 4mm

It was possible to achieve both an ultra-thin type thickness of under 4mm and obtain high leakage-resistance even when utilizing thin and light aluminum laminated film as the exterior packaging material because the electrolyte is completely gel-type.

*1: Discharge:0.2ItA(E.V.=2.75V) *2: The maximum thickness of the standard shipment charging condition.

Applications

- Cellular phone
- PHS
- PDA
- Notebook computer
- Personal transceivers
- Handy terminal
- Camcorder
- Digital camera
- Head set stereo
- CD player
- Mini Disc player
- etc.

L Type Cell (PCB*-less type)

The batteries attached "L" at their suffix are high safety models which are used our original super-efficient Manganese in the positive electrode. As they can prevent the unsafe situation at the over-charging, these cells can be attached to equipments without PCB.

However, they are recommended to assemble protection devices or to install measures in order to protect from the over-current and the over-discharge mode when they are used without PCB.

*: Protection Circuit Board

Lithium Polymer Battery Handling Precautions

Danger

- 1 Do not disassemble or modify the battery pack. The battery pack is equipped with built-in safety/protection features. Should these features be disabled, the battery pack can damage, overheat, emit smoke, burst and/or ignite.
- 2 Do not connect the positive (+) and negative (-) terminals with a metal object such as wire. Do not transport or store the battery pack together with metal objects such as necklaces, hair pins, etc. Otherwise, short-circuiting will occur, overcurrent will flow, causing the battery pack to damage, overheat, emit smoke, burst and/or ignite, or the metal object such as wire, necklace or hair pin can generate heat.
- 3 Do not discard the battery pack into fire or heat it. Otherwise, its insulation can melt down, safety features will be damaged and/or its electrolyte can ignite, possibly leading to damage, overheating, smoke emission, bursting and/or ignition on it.
- 4 Do not use or leave the battery pack near a heat source such as fire or heater (80°C or higher). If the resin separator should be damaged owing to overheating, internal short-circuiting may occur to the battery pack, possibly leading to damage, overheating, smoke emission, bursting and/or ignition of the battery pack.
- 5 Do not immerse the battery pack in water or seawater, and do not allow it to get wet. Otherwise, the protective features in it can be damaged, it can be charged with extremely high current and voltage, abnormal chemical reactions may occur in it, possibly leading to damage, overheating, smoke emission, bursting and/or ignition.
- 6 Do not recharge the battery pack near fire or in extremely hot weather. Otherwise, hot temperatures can trigger its built-in protective features, inhibiting recharging, or can damage the built-in protective features, causing it to be charged with an extremely high current and voltage, and, as a result, abnormal chemical reactions can occur in it, possibly leading to damage, overheating, smoke emission, bursting and/or ignition.
- 7 To recharge the battery pack, use the battery charger specifically designed for the purpose and observe the recharging conditions specified by SANYO. A recharging operation under non-conforming recharging conditions (higher temperature and larger voltage/current than specified, modified battery charger, etc.) can cause the battery pack to be overcharged, or charged with extremely high current, abnormal chemical reaction can occur in it, possibly leading to damage, overheating, smoke emission, bursting and/or ignition.
- 8 Do not pierce the battery pack with a nail or other sharp objects, strike it with a hammer, or step on it. Otherwise, the battery pack will become damaged and deformed, internal short-circuiting can occur, possibly leading to damage, overheating, smoke emission, bursting and/or ignition.
- 9 Do not strike or throw the battery pack. The impact might cause damage, overheating, smoke emission, bursting and /or ignition. And also if the protective feature in it may become damaged, it will be charged with extremely high current and voltage, abnormal chemical reactions can occur, possibly leading to damage, overheating, smoke emission, bursting and /or ignition.
- 10 Do not use an apparently damaged or deformed battery pack. Otherwise, damage, overheating, smoke emission, bursting and/or ignition of the battery pack may occur.
- 11 Do not directly solder the battery pack. Otherwise, heat can melt down its insulation, damage its gas release vent or safety features possibly leading to damage, overheating, smoke emission, bursting and/or ignition.
- 12 Do not reverse the positive (+) and negative (-) terminals. Otherwise, during recharging, the battery pack will be reverse-charged, abnormal chemical reactions then may occur, or excessively high current can flow during discharging possibly leading to damage, overheating, smoke emission, bursting and/or ignition.
- 13 The positive (+) and negative (-) terminals are arranged in a particular orientation. Do not force the connection if you cannot easily connect the battery pack terminals to the battery pack charger or other equipment. Confirm that the terminals are correctly oriented. Reversing the terminals will result in reverse-charging, possibly leading to damage, overheating, smoke emission, bursting and/or ignition of the battery pack.
- 14 Do not connect the battery pack to an electrical outlet, vehicle cigarette lighter, etc.

When subjected to large voltage, overcurrent can flow on the battery pack, possibly leading to damage, overheating, smoke emission, bursting and/or ignition.

- 15 Do not use the battery pack for a purpose other than those specified. Otherwise, its guaranteed performance will be lost and/or its service life will be shortened. Depending on the equipment in which the battery pack is used, excessively high current can flow through battery pack, possibly damaging it and leading to damage, overheating, smoke emission, bursting and/or ignition.
- 16 If the battery pack damages, and the electrolyte gets into the eyes, do not rub them, instead, rinse eyes with clean running water and immediately seek medical attention. Otherwise, eye injury may result.

Warning

- 1 Do not use the battery pack in combination with primary battery packs (such as dry-cell battery packs) or battery packs of different capacities or brands. Otherwise, the battery pack can be overdischarged during use or overcharged during recharging, abnormal chemical reactions may occur, possibly leading to damage, overheating, smoke emission, bursting and/or ignition.
- 2 If recharging operation fails to complete even when a specified recharging time has elapsed, immediately stop further recharging. Otherwise, damage, overheating, smoke emission, bursting and/or ignition can occur.
- 3 Do not put the battery pack into a microwave oven or pressurized container. Rapid heating or disrupted sealing can lead to damage, overheating, smoke emission, bursting and/or ignition.
- 4 If the battery pack damages or gives off a bad odor, remove it from any exposed flame. Otherwise, the electrolyte may catch fire, and the battery pack may emit smoke, burst or ignite.
- 5 If the battery pack gives off an odor, generates heat, becomes discolored or deformed, or in any way appears abnormal during use, recharging or storage, immediately remove it from the equipment or battery pack charger and stop using it. Otherwise, the problematic battery pack can develop damage, overheating, smoke emission, bursting and/or ignition.

Caution

- 1 Do not use or subject the battery pack to intense sunlight or hot temperatures such as in a car in hot weather. Otherwise, damage, overheating and/or smoke emission can occur. Also, its guaranteed performance will be lost and/or its service life will be shortened.
- 2 The battery pack incorporates built-in safety devices. Do not use it in a location where static electricity (greater than the manufacturer's guarantee) may be present. Otherwise, the safety devices can be damaged, possibly leading to damage, overheating, smoke emission, bursting and/or ignition.
- 3 The guaranteed recharging temperature range is 0 ~ 40°C. A recharging operation outside this temperature range can lead to damage and/or overheating of the battery pack, and may cause damage to it.
- 4 If electrolyte from the battery pack contacts your skin or clothing, immediately wash it away with running water. Otherwise, skin inflammation can occur.
- 5 Store the battery pack in a location where children cannot reach it. Also, make sure that a child does not take out the battery pack from the battery pack charger or equipment.
- 6 Before use, carefully study the Operation Manual and Precautions. For further information, contact a nearest SANYO distributor or representative. Safekeep the manual for future reference.
- 7 For recharging procedures, refer to the Operation Manual of your battery pack charger.
- 8 If you find rust, a bad odor, overheating and/or other irregularities when using the battery pack for the first time, return it to your supplier or vendor.
