

# Safety & Transport Regulations

## Standards

General safety recommendations for lithium batteries have been published in the standards *UL 1642* and *IEC 60086-4*.

## UL-recognition

Tadiran Lithium Batteries are recognized by UL under file *MH 12827*, please refer to **UL ONLINE CERTIFICATIONS DIRECTORY** for further information. The following text or a modified version thereof appears on each battery:

### **WARNING:**

Fire, explosion, and severe burn hazard. Do not recharge, disassemble, heat above 100 °C, incinerate, or expose contents to water.

## Classification of lithium batteries

Lithium metal batteries are dangerous goods, UN No. 3090. Lithium ion batteries are dangerous goods, UN No. 3480. **Table 2** indicates which Tadiran Lithium cells are exempted from the dangerous goods regulations and which are not. In air transport, exemptions are limited.

For more information on classification and transport regulations, please refer to Tadiran's technical notice: [www.tadiranbatteries.de/regulations/](http://www.tadiranbatteries.de/regulations/)

## UN tests

**Table 2** also shows the status of UN-tests for Tadiran Lithium Batteries according to the UN Handbook of Tests and Criteria, part III, sub-section 38.3. Regarding Tadiran Lithium Batteries not listed in table 2, please apply to Tadiran Batteries for a confirmation.

## Protection against charging

Whenever lithium batteries are not the single power source in a circuit the following measures are recommended by the Underwriters Laboratories:

The battery should not be connected in series with an electrical power source that would increase the forward current through the battery.

The circuit shall include one of the following:

A. Two suitable diodes in series with the battery to prevent any reverse (charging) current. The second diode provides protection if the other one fails; or

B. A blocking diode or the equivalent to prevent any reverse (charging) current and a resistor to limit current in case of a diode failure. The resistor should be sized to limit the reverse (charging) current to the maximums  $I_{R\max}$  shown in **Table 1**.

In addition to this UL requirement, which gives the safety limits, Tadiran Batteries recommend to limit the reverse (charging) current to values below 10  $\mu$ A. This will ensure that service life is not affected.

TLM-1550HP	100 mA
TLM-1520HE	25 mA
TLM-1530HE	50 mA
TLM-1550HE	100 mA

## Protection against forced discharge

Forced discharge of a cell can occur when it is connected in series with other cells. A bypass diode should be provided in parallel with each cell in a series connection. The effect of a bypass diode is that current passes through the diode if a cell has been discharged, preventing forced discharge.

## REACH and RoHS

All Tadiran cell are compliant with REACH regulation and RoHS directive.
